

NonStop Benefits Overview

NonStop improves business outcomes by being a superior platform -

A. For “ Online , Real-Time , All-the-Time ” information services

- to expand services and revenue streams, increase sales, build brand, increase the rewards from innovation, etc.
- for additional insights, see :

[Aligning Applications and Platforms
Expanding NonStop Opportunities

Standardization : \[www.cail.com/nitep\]\(http://www.cail.com/nitep\)](#)

B. To mitigate business risk - with more secure systems

- associated with UNIX / Linux / Windows systems that are continually under threat because of their pervasiveness and familiarity to many people
- that can occur with Mainframe and Midrange systems because many people in Enterprise IT work on these platforms, plus they need a lot of ongoing software and services to comply with increasing security requirements.
- with NonStop typically a self-contained platform not known to the outside world, the associated information services are very secure mainly because of –
 1. system uniqueness to satisfy the needs of online, real-time, all-the-time applications
 2. a limited number of people know how to access, program, and utilize NonStop systems

NonStop Benefits – cont'd
